

La géologie des Pyrénées... c'est aussi l'histoire des matériaux

Gondwana

Le continent unique se disloque

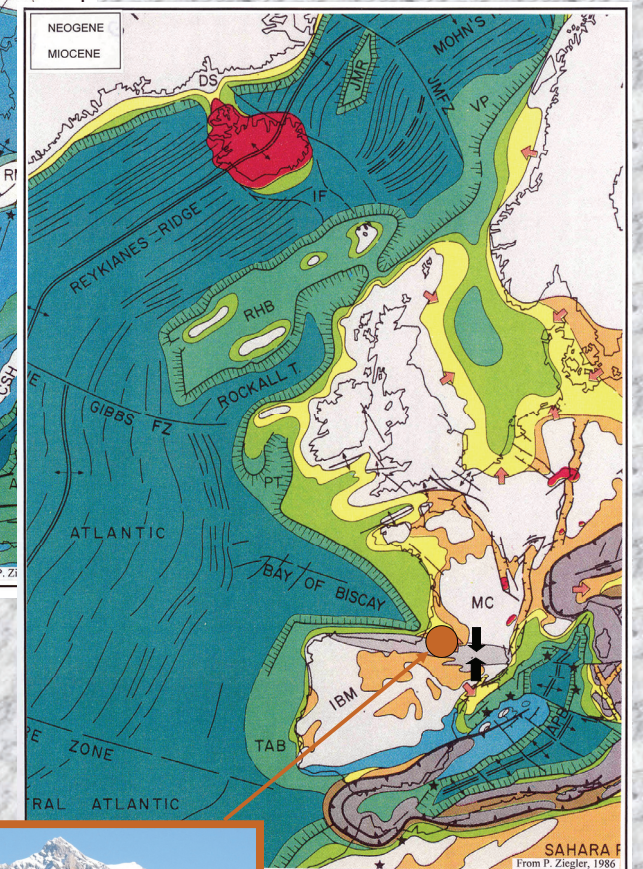

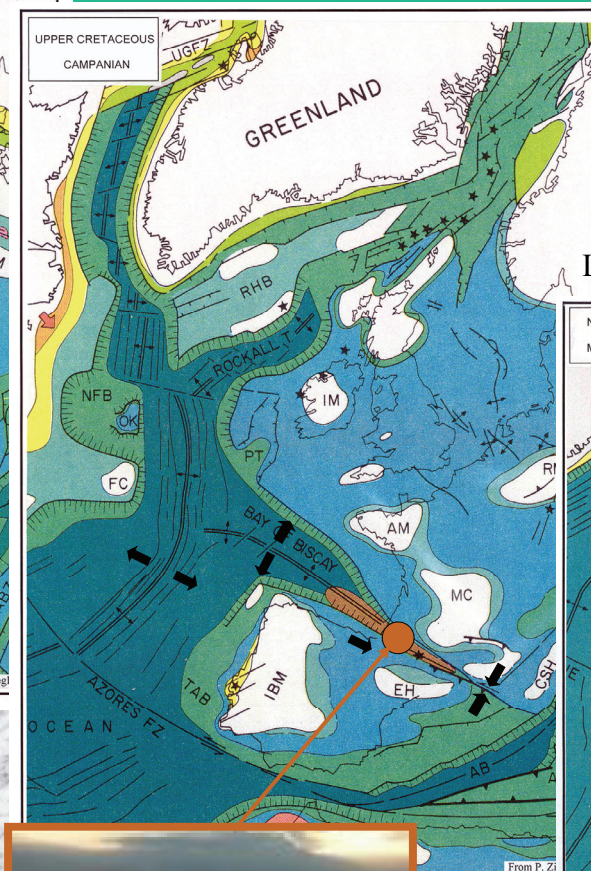

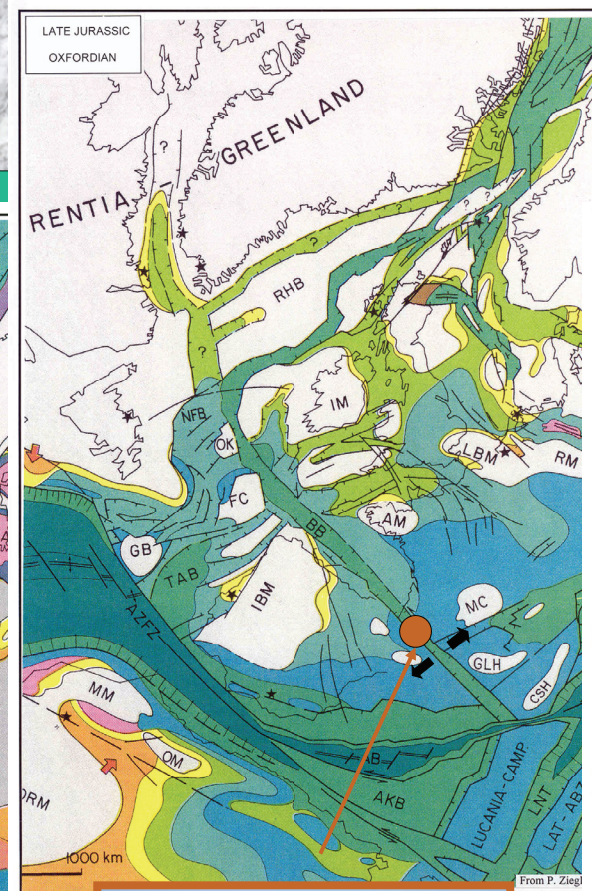

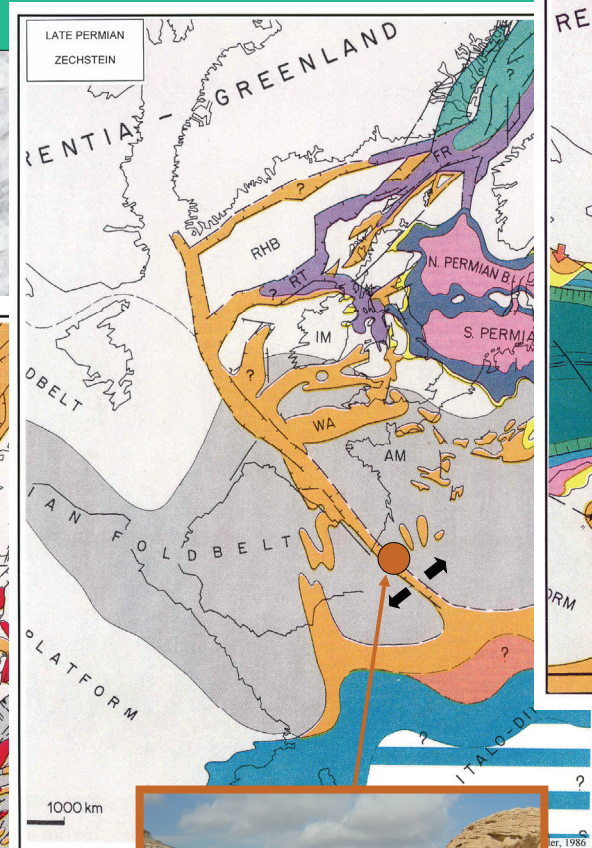

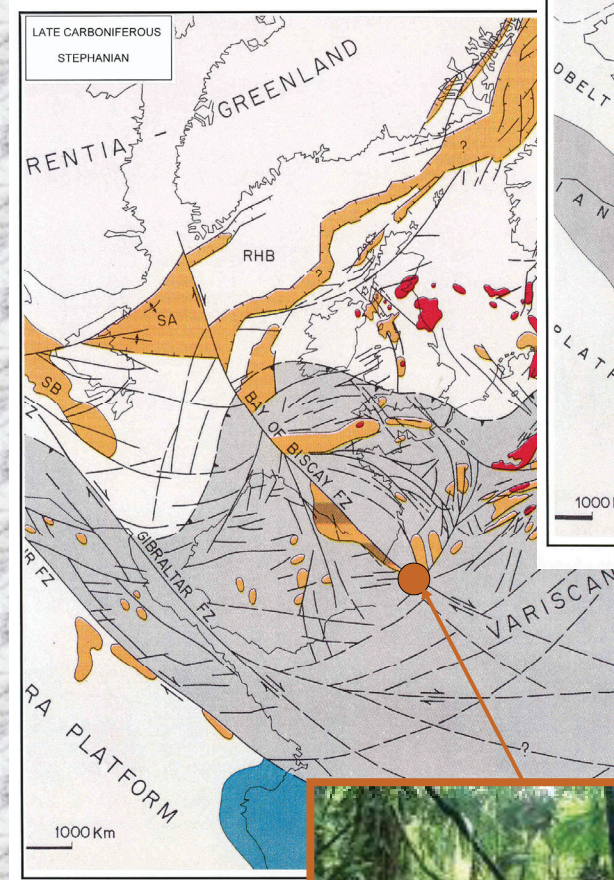

La mer envahit le rift et le continent

Un nouvel océan se forme: l'Atlantique

Actuel

Un continent unique: la Pangée

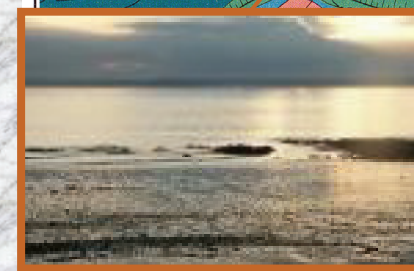

La collision crée l'émergence des Pyrénées

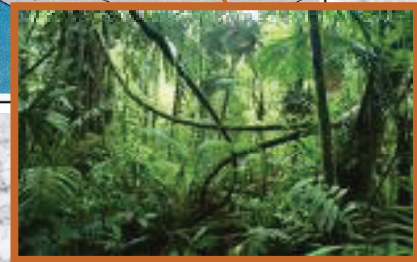

Des grès, du sel...

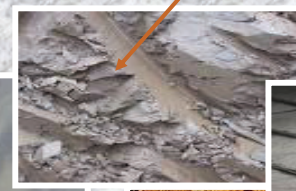

Des calcaires, puis des marbres...

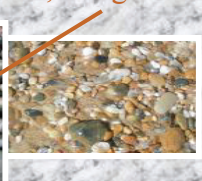

Des argiles, puis des ardoises.

Des granites, du charbon...

Des conglomérats, des galets...
